Auto-stop system available in both forward / reverse rotation modes

TW009G (Short anvil type)
For heavy-equipment maintenance—counterweight removal and installation

Tool hanger (Ring)
allows to hang the tool on pipes, hooks, etc.

TW010G (Long anvil type)
For wheel removal and installation on trucks

Compact

Ring illumination LED

Reduces the shadow of the socket on a workpiece, providing a better view of the workpiece.

Auto-stop system available in both forward / reverse rotation modes

3 modes of reaction time for automatic stop available both in forward and reverse rotation modes.

	Forward	Reverse
mode 1	At impact power 2, the tool stops automatically as soon as it has detected the first impact blow.	At impact power 4, the tool stops automatically as soon as it has stopped impact blow.
mode 2	At impact power 3, the tool stops automatically approximately 0.5 seconds after the moment it has detected the first impact blow.	At impact power 4, the tool stops automatically approximately 0.2 seconds after the moment it has stopped impact blow.
mode 3	At impact power 4, the tool stops automatically approximately 1.0 second after the moment it has detected the first impact blow.	At impact power 4, the tool automatically slows down after the moment it has stopped impact blow.

With regard to the reverse rotation mode (for loosening), the reaction time is set at the maximum impact power 4, which is the maximum capacity, because no adjustment of impact power is required for the mode.

Toolless installation of Side handle

Side handle can be installed 360° without a tool, and the angle of the holding section can be adjusted back and forth, making it suitable for a variety of operations.

Electronic 4 stage impact power selection

Both in forward and reverse rotation modes, max (4) / hard (3) / medium (2) / soft (1) impact power can be selected to suit the material of workpiece or bolt type simply by pushing the button.

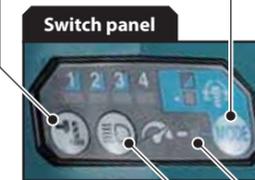

Pushing the button

Mode	Max mode (4)	Hard mode (3)	Medium mode (2)	Soft mode (1)
Fastening torque (N·m)*1	2,850	1,600	1,000	600
No load speed (min ⁻¹)	0-1,200	0-850	0-700	0-600
Impacts per minutes (min ⁻¹)	0-1,750	0-1,500	0-1,300	0-1,200

XPT
(eXtreme Protection Technology)

Ring illumination LED switch
With preglow/afterglow functions and light mode

Full speed mode lamp

Full speed mode button (Variable speed / Full speed)

- Full speed is reached with less trigger pull, reducing fatigue in continuous operation.
- Variable speed mode or Full speed mode can be selected depending on applications.
