Mapping using LiDAR sensor (2D) & Camera sensor

Mapping added as a new feature

Equipped with LiDAR sensor (2D) and Camera sensor, the cleaner can map and memorize the rooms to clean.

LiDAR module (LiDAR sensor)

Grasping and mapping the two-dimensional shape of rooms with a rotating laser displacement gauge.

Vision camera (Camera sensor)

Grasping the characteristic shape of ceilings and walls, and memorizing them by connecting them with the self-location of the Robotic cleaner to increase mapping precision.

Running mode

Mapping

Equipped with LiDAR sensor (2D) and Camera sensor, the cleaner can map and memorize the rooms to clean. Then, based on the map, the cleaner can track an optimal route for efficient cleaning.

Free cleaning

In "Free cleaning" mode, cleaning can be started immediately without registering room information

Improved repairability

Due to Bottom plate and Side brushes removable without tool

Can be attached/ detached from the top of the machine.

Constantly Strong Suction

Automatic self-cleaning filter
obtained by Triple filter structure composed of:
Powder filter + Damper + Prefilter

When the power is switched on, Prefilter collapses into itself to compress Damper, and fits closely over Damper and Powder filter.

When the power is switched off, Damper expands back to its original size and shakes off dust from Prefilter automatically with its expanding power.

Powder filter
Damper
Prefilter

Wet & Dry

Allows for:
Constantly high suction power
Easy filter cleaning simply by tapping dust off of Prefilter
Quiet cleaning because Damper and Prefilter make no noise
